

# Sea Frost BG 2000

## Refrigerator/Freezer System for Trawlers

The Sea Frost BG2000 is designed for boats with either onboard or dockside AC power generation. This powerful refrigerator/freezer system combines holding plates and refrigerant R-404a to obtain ultra cold temperatures utilizing generator power when available. This means minimal daily running time and peaceful evenings with no machinery noise.

Sea Frost uses only the highest marine grade materials and quality construction. The compact, hermetic, one horsepower compressor section is water cooled using a remote pump. The electrical parts are housed in an attached fiberglass housing. Because there's no battery or inverter use, larger freezers are possible.

- ❄ Fast Freeze = Minimal Generator Running Time
- ❄ Requires No Battery or Inverter Use
- ❄ Holdover Plates Keep Box Colder Longer
- ❄ Utilizes Low Temperature R-404a Refrigerant
- ❄ High Quality Marine Grade Construction
- ❄ Peaceful Evenings--No Generator Noise!
